PROFILE SUMMARY

Software Engineering graduate from the University of Westminster with industry experience as a Full Stack Developer and currently working as a Front End Developer. Skilled in NextJS, ReactJS, Laravel, NestJS, Flask, React Native, Flutter and Firebase, with hands on experience building scalable, user focused applications. Proven ability to lead projects and development teams while delivering high quality work under pressure in fast paced environments.

SKILLS

- Java, Python, PHP, JavaScript (ES6), TypeScript, HTML, CSS
- NextJS, React + Vite, NestJS, ExpressJS, Laravel, Flask, TailwindCSS
- Flutter, React Native, MySQL, MongoDB, SQLite
- Python ML ecosystem
- Git, GitHub
- Visual Studio Code, IntelliJ IDE, Eclipse IDE, Android Studio, Xcode, Postman, Composer, npm, PHPUnit, ESLint
- Firebase, Google Cloud Platform, Google Maps API, RESTful APIs, API integration
- UI/UX implementation, responsive web design
- Teamwork and Leadership skills, Collaborative engineering, Project Management, Time management and accuracy under pressure, Technical adaptability, Clear communication, Analytical and debugging ability.

WORK EXPERIENCE

Jaan Network Pvt Ltd – Front End Developer

April 2025 – Present

- Lead end to end development across frontend and backend teams, building responsive, scalable interfaces using ReactJS, HTML, CSS, Tailwind CSS and JavaScript (ES6) while ensuring clean architecture, accurate API usage and smooth integration with Laravel and MySQL.
- Act as the primary problem solver during development, guiding backend developers through API crashes, debugging integration issues and mentoring intern developers to maintain code quality and meet tight deadlines under pressure.
- Coordinate project timelines, align cross team communication and translate UI/UX requirements, performant features delivering stable user centric applications even when sudden client changes require rapid turnaround.

Cloud99X – Software Engineering Intern

July 2023 – July 2024

- Built responsive and maintainable web interfaces using NextJS and Tailwind CSS, contributing to production ready features with clean architecture, performance optimisation and user focused design.
- Developed backend functionality with NestJS, integrated Firebase for authentication and real time data management and deployed application components on Google Cloud Platform, ensuring scalability and reliability.
- Created cross platform mobile applications using React Native, implementing navigation flows, state management, Google Maps API and API integrations to deliver functional, location aware mobile experiences.

EDUCATION

University of Westminster – BEng (Hons) Software Engineering

Sept 2021 – Sept 2025

(IIT Sri Lanka Affiliated Programme)

Final Year Project- siNews: Domain Specific Hybrid Approach for Summarizing Low Resource Sinhala News

- Developed a responsive frontend with ReactJS, Vite, HTML, CSS, TailwindCSS and implemented a backend API using Python and Flask to connect the summarization model seamlessly.
- Preprocessed datasets, fine tuned the mT5 model and integrated the TextRank algorithm to generate accurate, domain specific Sinhala news summaries.
- Scraped, translated and managed news articles using BeautifulSoup, Google Translator, Hugging Face and SQLite, while maintaining version control with GitHub and optimizing workflows with VS Code and Google Colab.

PROJECTS

Student Information Management System (SIMS)

- Engineered a full stack web application with Laravel, Sanctum, MySQL (backend) and React, Vite, Tailwind CSS (frontend) to manage students, courses, grades, attendance, fees and assessments.
- Implemented multi role access control (Admin, Student, Parent), developed interactive dashboards and visualized analytics for grades, attendance trends, fee payments and application statuses.
- Integrated APIs, ensured secure authentication, optimized system performance and maintained development workflows using Composer, npm, PHPUnit and ESLint, delivering a scalable, robust and user centric solution.
